1. Purpose of the document

1.1 The primary purpose of the Health Impact Assessment (HIA) Supplementary Planning Document (SPD) is to help improve the health of the residents of Nuneaton and Bedworth. Whilst the delivery of health and well-being improvements and services is multifaceted, planning has an important role to play in shaping healthy communities. The adopted Borough Plan (2011 – 2031) includes several policies that focus on different aspects of health and well-being. This document provides additional detail of the requirements of Policy HS5 in the Borough Plan.

Policy HS5 – Health

All major development proposals will be required to demonstrate that they would have an acceptable impact on health and wellbeing. This should be demonstrated through a:

• Health Impact Assessment where significant impacts on health and wellbeing would arise from that proposal, or

 Health Impact Assessment Screening Report which demonstrates that the proposed development would not overall give rise to negative impacts in respect of health and wellbeing.

All Health Impact Assessments shall be undertaken in accordance with the council's Health Impact Assessment supplementary planning document.

Where a development has significant negative or positive impacts on health and wellbeing, the council may require applicants to provide for the mitigation or provision of such impacts through planning conditions and/or financial/other contributions secured via planning obligations or CIL.

1.2 The Council recognises that health and well-being are key issues at both national and local level. Health is not simply about access to medical facilities; it is also about lifestyle and the environment. The World Health Organisation (WHO) refers to health being a "state of complete physical, mental and social well-being and not merely the absence of disease or

infirmity".¹ The built environment can impact on the factors that are known to influence a person's health status and lifestyle, including economic, social, and environmental conditions. These factors are referred to as the wider or social determinants of health.

- 1.3 This SPD sets out how applications for major development will be required to demonstrate that they would have an acceptable impact on health and well-being. This will be through the submission of either a Health Impact Assessment or a Health Impact Assessment Screening Report. It elaborates on existing policy and evidence in relation to health and wellbeing. It also identifies sources of data to consider, provides examples of health impacts of the built environment to consider and enhance positive impacts.
- 1.4 This SPD is a material consideration in the determination of planning applications and provides information and appropriate guidance to those submitting a planning application for major development. Anyone intending to submit an application for major development should read this SPD and contact the Council's Planning team for further advice and information if required (024 7637 6376).

¹ World Health Organisation, Constitution of WHO: principles <u>http://www.who.int/about/mission/en/</u>

2. Requirements for health impact assessments (HIAs)

- 2.1 Policy HS5 requires that a HIA be undertaken for applications that meet the threshold for an Environmental Impact Assessment (EIA). The Borough Plan defines major development as the provision of dwellinghouses where the number of dwellinghouses to be provided is 10 or more, or the development is to be carried out on a site having an area of 0.5 hectares or more. In relation to all other types of development, major development is development carried out on a site having an area of 1 hectare or more.
- 2.2 It is considered appropriate to do this as it is extremely likely that such an application will impact health. Planning applications that do not require an EIA are still likely to impact on health but identifying an appropriate scale of application is challenging. The impact on health is likely to vary even for applications for similar use classes. Therefore, Policy HS5 recommends that a screening process be undertaken to assist in determining whether a HIA is required.
- 2.3 By carrying out a HIA, an applicant can identify where the proposal might have a negative impact on one or more aspects of health and well-being, and it gives the opportunity for mitigation.

Toolkit to identify health impacts

- 2.4 Warwickshire Public Health recommends the use of either the London Healthy Urban Development Unit (HUDU) HIA tool², or the Wales HIA Support Unit (WHIASU) tool³. Warwickshire Public Health will be consulted on any HIAs submitted to the Council in support of a planning application. The supporting text for Policy HS5 makes reference to the Birmingham City Council Health Impacts Toolkit but this tool was not adopted at a regional level. Warwickshire Public Health's preferred approach is to use the tools outlined within this document (HUDU and WHIASU).
- 2.5 In light of the recommendations from Warwickshire Public Health, the Council has adapted an assessment matrix from the HUDU. Applicants should use this Development Health Assesssment (Appendix B) as a HIA Screening Report and it should be submitted with planning applications for major development.

² <u>https://www.healthyurbandevelopment.nhs.uk/wp-content/uploads/2019/10/HUDU-Rapid-HIA-Tool-October-2019.pdf</u>

³ <u>https://whiasu.publichealthnetwork.cymru/files/1415/0710/5107/HIA_Tool_Kit_V2_WEB.pdf</u>

2.6 The Development Health Assessment is designed to be used early in the planning process to aid decision-making in relation to impacts on heath. It provides an overview of some of the broad detrminants of health and well-being and it provides a means of recording the consideration given to impacts on health. The intention is that it complements the other policies in the Borough Plan that can impact on the wider determinants of health.

Process for using the Development Health Assessment

- 1. Identify the criteria from the 11 different categories that are relevant to the development. The 'Details/evidence' column should be completed for each of the criteria, including those that are considered not to be relevant. The details provided should be stated clearly as some of the criteria could be subjective. If it is not yet known/clear whether some of the criteria will be met, then this should be stated in the 'Details/evidence' column.
- 2. Consider the evidence for why the criteria are or are not relevant for the proposal. The evidence can be from a range of sources, including other documents submitted in support of the application such as the design and access statement, transport assessment and EIA. Other possible sources of evidence are listed in Appendix A. Of particular importance is the Warwickshire Joint Strategic Needs Assessment (JSNA) that provides information on local health-related needs.
- 3. Use the evidence to determine whether the potential health impact is likely to be positive, negative, or neutral. The health impacts could be short-term, long-term or both and some may have a more local impact whereas others could have a wider impact. Record this information in the 'Potential Health Impact' column. Where there is a lack of data, the impact can be recorded as uncertain but further investigation should be undertaken.
- 4. The 'Recommended Mitigation or Enhancement' column only needs to be completed when the evidence indicates that the impacts (positive or negative) are likely to be significant. It should be stated that the impact would be significant and then the proposed mitigation or enhancement actions should be listed.
- 2.7 The completed Development Health Assessment should be submitted to the Council with the planning application. Although the Develomemnt Health Assessment presents the categories and criteria that are likely to influence health and well-being, it should not be taken as an exhaustive

list. Extra criteria can be added by the Council and/or by statutory consultees as necessary for proposed development.

2.8 The following shows how the 11 different categories within the toolkit can be impacted by planning and some potential matters for applicants to consider during the application process. The considerations and potential health impacts will aid the completion of the Development Health Assessment and therefore the design of the proposal.

Housing design and affordability

2.9 Access to decent and adequate housing is critically important for health and well-being, especially for the very young and the very old. Environmental factors, overcrowding, and sanitation in buildings as well as unhealthy urban spaces have been widely recognsied as causing illness since urban planning was formally introduced. Post-construction management also impacts on community welfare, cohesion and mental well-being.

- Accessible and adaptable dwellings
- Internal space standards, orientation and layout
- Affordable housing and dwelling mix
- Energy efficiency

Negative impacts	Positive impacts
Lack of affordable housing may compromise the health of low- income residents as they would likely spend more on housing costs and so less on other health care needs.	Affordable housing has the potential to improve well-being. Housing quality can be improved with appropriate construction methods including materials for noise insulation and energy efficiency and designs that provide accessible, adaptable and well-orientated homes.
Location, design and orientation of housing can be detrimental to physical and mental health and safety. Over-crowding can also affect mental health.	Sufficient range of housing tenures with good basic services is esential. Adaptable buildings for community uses can contribute towards a sustainable community. Layouts can provide space for communal activites with specific vulnerable groups in mind.
Poor quality design, especially internal sound insulation, daylighting and private amenity space can	Adaptable homes allow occupants to remain in their home despite changing requirements and better

Negative impacts	Positive impacts
influence health and well-being of	facilitates care provision in the
occupants.	community.

Table 1: Housing quality and design health impacts

Policy H1 – Range and mix of housing Policy H2 – Affordable housing Policy NE2 – Open space Policy BE3 – Sustainable design and construction Sustainable Design and Construction SPD

Access to health and social care services and other social infrastructure

2.10 Strong, vibrant, sustainable and cohesive communities require good quality, accessible public services and infrastructure. Encouraging the use of local services is influenced by accessibility, in terms of transport and access into a building, and the range and quality of services offered. Access to good quality health and social care, education (primary, secondary and post-19) and community facilities has a direct positive effect on human health.

- Health and social care needs and demand for services
- Capacity of existing facilities and services
- Timing, location and accessibility and developer contributions
- Reconfiguring health and social care services
- Multi-purpose buildings and co-location of services
- Access and use of buildings by disabled and older people

Negative impacts	Positive impacts
Negative impacts Failing to plan for the social infrastructure needs in an area can exacerbate pressure of existing services and worsen health outcomes and inequalities.	Positive impacts Accessible healthcare services, including specialist targeted services and other social infrastructure to support population growth and change is essential for creating sustainable, healthy communities. Provision of safe social spaces for children and young people associated with their safety, wellbeing, education, and development (e.g. youth centres or
	sports facilities) should be considered.

Negative impacts	Positive impacts
Under-provision of key services can contribute towards unnecessary extra travel, which can damage the environment and social cohesion.	Planning can help modernise facilities and improve the quality of services. Developer contributions can help provide and fund new facilities.
Poor access to local services could limit opportunities for social interaction and lead to isolation and depression for those with mobility problems.	Co-locating some services can improve the effectiveness and efficiency of service delivery, for example, primary health and social care, dentistry and pharmacies.
	Access to a range of education, primary, secondary and post-19 improves self-esteem, job opportunities and earning capability.

Table 2: Access to health and social care services and other social infrastructure health impacts

Relevant Borough Plan policies and SPDs

Policy HS1 – Ensuring the delivery of Infrastructure. Policy HS2 – Strategic accessibility and sustainable transport Policy HS4 – Retaining community facilities.

Access to open space and nature

- 2.11 Providing secure, convenient and attractive open/green space can lead to more physical activity and reduce levels of heart disease, strokes and other ill-health problems that are associated with both sedentary occupations and stressful lifestyles. There is growing evidence that access to parks and open spaces and nature can help to maintain or improve mental health.
- 2.12 The patterns of physical activity established in childhood are perceived to be a key determinant of adult behaviour; a growing number of children and young people are missing out on regular exercise, and an increasing number of children and young people are being diagnosed as obese. Access to play spaces, community or sport facilities such as sport pitches can encourage physical activity. There is a strong correlation between the quality of open space and the frequency of use for physical activity, social interaction or relaxation. The design and layout of open space is important for increasing physical activity and play. Spaces should be inclusive, accessible and address the various,

differing needs of people throughout their life stages and supporting the reduction of inequalities.

2.13 The Sport England Active Design Principles advise on how to increase activity through the design process.

Issues to consider:

- Opportunities for physical activity
- Access to open and natural space
- Formal and informal outdoor play spaces
- Maintenance of open space and sports facilities
- Integration with other outdoor uses such as food growing

Negative impacts	Positive impacts
Failing to protect local green spaces and playing fields near to communities can limit opportunities for physical activity. Green spaces that are poor quality, feel unsafe, or are inaccessible will discourage physical activity and social interaction.	Provision of publicly accessible green spaces and play spaces can encourage physical activity and maintain or improve mental health Children and young people will require a range of formal and informal play spaces and equipment. Outdoor spaces and equipment should be age- appropriate and consider the specific needs of adolescents as well as younger children and include a variety of activities. Parks and other outdoor spaces should avoid
	isolating specific areas and spaces to increase safety
Failing to provide range of different types of open and play spaces may place pressure on existing spaces where formal and informal activities may conflict with each other.	Natural spaces and tree cover provide areas of shade and can improve the air quality in urban areas.
	May be opportunities to integrate play spaces with other related health and environmental programmes such as food growing and increasing biodiversity.

Policy HS6 – Sport and exercise Policy NE1 – Green Infrastructure Policy NE2 – Open space Policy NE3 – Biodiversity and geodiversity Policy BE3 – Sustainable design and construction Sustainable Design and Construction SPD

Air quality, noise, and neighbourhood amenity

2.14 The quality of the local environment can have a significant impact on physical and mental health. Pollution caused by construction, traffic and commercial activity can result in poor air quality, noise nuisance and vibration. Poor air quality is linked to incidence of chronic lung disease (chronic bronchitis or emphysema) and heart conditions and asthma levels of among children and young people. Noise pollution can have a detrimental impact on health resulting in sleep disturbance, cardiovascular and psycho-physiological effects. Good design and the separation of land uses can lessen noise impacts.

Issues to consider:

- Construction impacts
- Air quality
- Land contamination
- Noise, vibration and odour
- Quality of the local environment
- Provision of green space and trees

Negative impacts	Positive impacts
Construction can result in exposure	Construction management plans

	Natural spaces and trees can
	improve the air quality in urban
	areas.

Table 4: Air quality, noise and neighbourhood amenity health impacts

Relevant Borough Plan policies and SPDs

Policy BE3 – Sustainable design and construction

Sustainable Design and Construction SPD Air Quality SPD

Accessibility and active travel

2.15 Convenient access to a range of services and facilities minimises the need to travel and provides greater opportunities for social interaction. Buildings and spaces that are easily accessible and safe also encourage all groups, including older people and people with a disability, to use them. Discouraging car use and providing opportunities for walking and cycling can increase physical activity and help prevent chronic diseases, reduce risk of premature death and improve mental health.

- Streetscape
- Opportunities for walking and cycling
- Access to public transport
- Miniminsing the need to travel
- Discouraging car use
- Road traffic injuries

Negative impacts	Positive impacts
Greater traffic volumes and speeds have increased the risk of road traffic injuries, with pedestrians and cyclists being particularly vulnerable. Poor urban planning has prioritised the car over pedestrians and increased community severance.	Combining active travel and public transport options can help people achieve recommended daily physical activity levels Inclusive design, access, orientation and streetscape impact access to facilities using public transport, walking or cycling. Consider the safety of public transport facilities such as ensuring that bus stops are in opened and accessible locations and safely lit; ensuring secure cycle storage spaces; safe and well-lit walking routes and keeping entrances in open sight lines.
Over provision of car parking can undermine other travel modes such as public transport and cycling.	Reduced levels of car parking and travel plans which encourage the use of public transport, cycling and walking will result in increased opportunities for active travel. Promote cycling and walking by connecting routes and public to wider networks, providing safe

junctions and calming traffic and
providing secure cycle parking
spaces.

Table 5: Accessibility and active travel health impacts

Relevant Borough Plan policies and SPDs

Policy HS1 – Ensuring the delivery of infrastructure Policy HS2 – Strategic accessibility and sustainable transport Policy BE3 – Sustainable design and construction Sustainable Design and Construction SPD

Crime reduction and community safety

2.16 Thoughtful planning and urban design that promotes natural surveillance and social interaction can help to reduce crime and the 'fear of crime', both of which impacts on the mental wellbeing of residents. As well as the immediate physical and psychological impact of being a victim of crime, people can also suffer indirect long-term health consequences including disability, victimisation and isolation because of fear. Community engagement in development proposals can lessen fears and concerns.

- Designing out crime
- Security and street surveillance
- Mix of uses
- Community engagement
- Major accidents/disasters

Negative impacts	Positive impacts		
Poor urban design can	Detailed design and layout of		
exacerbate crime and community	residential and commercial areas can		
safety and increase harm to	ensure natural surveillance over public		
young people in particular by	space. This can be assisted by creating

	adolescents, or the needs of adults
	compared to children) which can also
	help to enhance community safety.
	Consider cultural opportunities for
	young people to engage with in their
	communities.

Table 6: Crime reduction and community safety health impacts

Relevant Borough Plan policies and SPDs

Policy BE3 – Sustainable design and construction Sustainable Design and Construction SPD

Access to healthy food

- 2.17 Access to healthy and nutritious food can improve diet and prevent chronic diseases related to obesity. People on low incomes, including young families, older people are the least able to eat well because of lack of access to nutritious food. They are more likely to have access to food that is high in salt, oil, energy-dense fat and sugar.
- 2.18 Opportunities to grow and purchase local, healthy food and limiting concentrations of hot food takeaways can change eating behaviour and improve physical and mental health.

- Healthy localised food supply
- Hot food takeaways
- Social enterprises
- Allotments and community food growing spaces

Negative impacts	Positive impacts
Centralisation of shopping facilities	Consideration of food access,
and growth of large supermarkets	location and how to facilitate social

Negative impacts	Positive impacts	
can reduce the variety of foods	enterprises can help to create the	
available locally and disadvantage	conditions that enable low income

Redevelopment of local allotments,	Preserve and protect areas for small-	
gardens or agricultural land can also	scale community projects and local	
reduce the potential for locally	food production, including	
grown food.	allotments.	
Overconcentration of hot food takeaways can restrict healthy eating choices.	Promote an increase in the diversity of shopping facilities in local centres, restrict large supermarkets, and limit concentrations of hot food takeaways. Consider alternatives to hot food takeways that still allow certain groups (e.g. young people) to have access to warm food and	
	socialise in safety.	

Table 7: Access to healthy food health impacts

Relevant Borough Plan policies and SPDs

Policy HS4 – Retaining community facilities. Policy HS7 – Creating a healthier food environment. Policy NE2 – Open Space Planning for a healthier area – hot food takeaways SPD

Access to work and training

2.19 Employment and income is a key determinant of health and wellbeing. Unemployment generally leads to poverty, illness and a reduction in personal and social esteem. Works aids recovery from physical and mental illnesses.

- Access to employment and training
- Job diversity
- Childcare
- Business support

Negative impacts	Positive impacts	
Locating employment in	Urban planning linked to clear	
inaccessible locations or failing to	strategies for economic	
provide a diversity of local jobs or	regeneration, allocation of	
training opportunities can negatively	appropriate sites and coordination	
affect health and mental wellbeing	of infrastructure provision can help	
both directly and indirectly.	to facilitate attractive opportunities	

	for businesses, encourage diversity in employment and ensure that local jobs are retained.
Poor quality environment and lack of infrastructure can make places less competitive or attractive to business investment.	Equitable transport strategies can play an important part in providing access to job opportunities. Provision of local work can encourage shorter trip lengths, reduce emissions from transport and enable people to walk or cycle.
Lack of business and employee support through affordable business	Access to other support services, notably childcare, or apprentice
space and childcare provision can hinder economic and growth and	opportunities for young people can make employment easier to access.
employment opportunities.	

 Table 8: Access to work and training health impacts

Relevant Borough Plan policies and SPDs

Policy E1 – Nature of employment growth Policy E2 – Existing employment estates Policy HS2 – Strategic accessibility and sustainable transport

Social cohesion and inclusive design

- 2.20 Friendship and supportive networks in a community can help to reduce depression and levels of chronic illness as well as speed recovery after illness and improve wellbeing. Fragmentation of social structures can lead to communities demarcated by socio-economic status, age and/or ethnicity, which can lead to isolation, insecurity and a lack of cohesion.
- 2.21 Voluntary and community groups, properly supported, can help to build up networks for people who are isolated and disconnected, and to provide meaningful interaction to improve mental wellbeing. Planning proposals should be developed in consultation with differentiated community groups (such as children, young people, residents, families, businesses, faith groups, community organisations). They should be involved in the planning of the project from the beginning and throughout the life cycle of the project. Opportunities for post-planning qualitative consultations should be considered with these different groups to explore a range of social, emotional and health needs.
- 2.22 Planning Practice Guidance now refers to inclusive and age-friendly design and the issues and principles to be considered, and characteristics of a dementia-friendly community.

- Opportunities for social interaction
- Compact, mixed-use, walkable neighbourhoods
- Access to community facilities and services
- Community engagement and voluntary sector involvement
- Connectivity and permeability reducing community severance
- Inclusive and age-friendly design

Negative impacts	Positive impacts
Social cohesion can be undermined by insensitive housing redevelopment and dispersal of resident communities.	Help to facilitate social cohesion by creating safe and permeable environments with places where people can meet informally and consider the availability of positive community guardianship. Consider intergenerational mixing which has been proven to improve community cohesion, such as having nurseries and nursing homes being located close to each other.
Community cohesion can also be affected by infrastructure such as roads or other development that severs community links. Large schemes may disrupt familiar walking routes or create a barrier to movement.	Mixed-use developments in town centres and residential neighbourhoods can help to widen social options for people.
Poor planning may also result in the loss of community facilities.	Provision of a range of diverse local employment opportunities (paid and unpaid) can also improve both social cohesion and mental wellbeing.
Planning does not directly affect income but it does have many indirect effects. The planning system can be used, for example, to hinder or to help the process of providing a range of facilities and providing opportunities for improving levels of equity.	nclusive design health impact

Table 9: Social cohesion and inclusive design health impact

Relevant Borough Plan policies and SPDs

Policy H1 – Range and mix of housing. Policy H2 – Affordable housing Policy E1 – Nature of employment growth Policy TC2 – Nature of town centre growth Policy HS2 – Strategic accessibility and sustainable transport Policy HS4 – Retaining community facilities.

Minimising the use of resources

2.23 Reducing or minimising waste including disposal, processes for construction as well as encouraging recycling at all levels can improve human health directly and indirectly by minimising environmental impact, such as air pollution.

Issues to consider:

- Making the best use of exsting land
- Recycling and reuse
- Sustainable design and construction
- Waste management
- Potential hazards

Nogativo impacts	Positivo impacto
Negative impacts If left unchecked, disposal of significant hazardous waste can have a serious impact on the health of those communities living near to collection or disposal sites.	Positive impacts Ensure hazardous waste is disposed of correctly, as well as ensure that local recycled and renewable materials are used whenever possible in the building construction process.
Sending out waste from a redevelopment site to be sorted or disposed can increase vehicle movements, emissions and cause significant disruption including noise and dust which can contribute towards health problems for residents.	Redevelopment on brownfield sites or derelict urban land also ensures that land is effectively used, recycled and enhanced.
Allso ecological impacts (stripping of materials, mining for minerals etc) through excessive use of resources from a scarce global environment.	Through encouraging reduction, reuse and recycling, resource minimisation can be better realised and contribute towards a better environment. Example of a standard to consider is BREEAM (Building Research Establishment Environmental Assessment Method).

Table 10: Minimising use of resources health impacts

Relevant Borough Plan policies and SPDs

Policy BE3 – Sustainable design and construction Sustainable Design and Construction SPD

Climate change

- 2.24 There is a clear link between climate change and health. Local areas should prioritise policies and interventions that 'reduce both health inequalities and mitigate climate change' because of the likelihood that people with the poorest health would be hit hardest by the impacts of climate change.
- 2.25 Planning is at the forefront of both trying to reduce carbon emissions and to adapt urban environments to cope with higher temperatures, more uncertain rainfall, and more extreme weather events and their impacts such as flooding. Poorly designed homes can lead to fuel poverty in winter and overheating in summer contributing to excess winter and summer deaths. Developments that take advantage of sunlight, tree planting and accessible green/brown roofs also have the potential to contribute towards the mental wellbeing of residents.

- Renewable energy
- Sustainable transport
- Building design
- Biodiversity
- Flood risk and drainage

Negative impacts	Positive impacts
Can exacerbate the impacts of climate change by failing to consider relevant influences such as location, materials, designs or technologies that could help to reduce energy consumption or reduce the environmental impact of energy generation.	Can help to reduce greenhouse gas emissions by requiring lower energy use in buildings and transport, and by encouraging renewable energy sources.
Building in flood plain areas or a lack of local sustainable urban drainage measures may lead to greater flood risk.	Can address sustainability and environmental considerations through the use of standards that will help to reduce energy demands and increase the amount of renewable energy.
Neglecting to consider the microclimate for the siting of a proposed development, and the influence the development might have on that microclimate, could lead to new buildings that are neither suitable nor adaptable to their environment.	Design techniques can ensure that new housing and public realm can adapt to changes in temperature.

Negative impacts	Positive impacts
	Flood risk can be reduced through a sequential approach to locating development and by introducing mitigation measures, such as sustainable urban drainage systems
	in new developments.

3. Health Impact Assessment

Introduction to HIA

- 3.1 A HIA is defined as "a combination of procedures, methods and tools by which a policy, programme or project may be judged as to its potential effects on the health of a population, and the distribution of those effects within the population."⁴
- 3.2 However, alternative definitions have been proposed as the practice of HIA has evolved, such as that by Elliott et al. (2010)⁵:

"...a process through which evidence (of different kinds), interests, values and meanings are brought into dialogue between relevant stakeholders (politicians, professionals and citizens) in order to imaginatively understand and anticipate the effects of change on health and health inequalities in a given population."

3.3 Our understanding of how the built and natural environment can impact our health has increased. HIAs contribute towards the wider determinants of health and are a democratic tool in that with good quality community consultation and by carrying out a HIA as early as possible it can inform planning decisions for proposed new development.

Carrying out a HIA

3.4 Guides showing a detailed description of the HIA process and the different stages involved are listed in Appendix A. It is recommended that the HIA process be undertaken as early as possible in the design process to allow the maximum mitigation of any identified health impacts. The process should be completed using the information known about the proposal at the time of the submission of the planning application. However, it is acknowledged that there will be less information known for some planning application types, such as outline planning applications. In these instances, the HIA process will be required to be repeated when more information is known about the proposal, for example when a reserved matters planning application is submitted.

⁴ The European Centre for Health Policy (1999) Gothenburg Consensus

⁵ Elliott, E., Harrop, E. and Williams G.H. (2010) Contesting the science: public health knowledge and action in controversial land-use developments in Bennett, P., Calman, K., Curtis, S. and Fischbacher-Smith, D. (eds) *Risk Communication and Public Health (second edition)*, Oxford: Oxford University Press.

3.5 There is no set methodology for a HIA but most follow the stages described below. There are normally five stages, but the following is a brief overview rather than a thorough guide. Please see Appendix A for existing, detailed guidance.

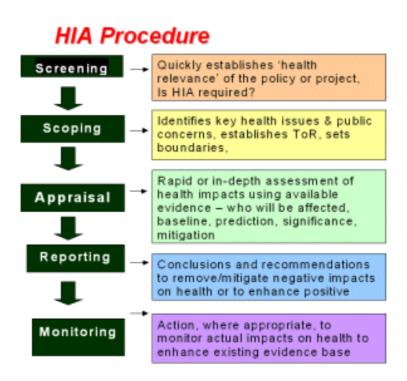

Figure 1: HIA Procedure (World Health Organisation)

1. Screening

The first stage identifies whether the remainder of the HIA process is necessary for a proposal through a quick review of any potential health impacts. While other approaches can be used, the Council recommends that applicants use the Development Health Assessment presented in Appendix B of this document. Where an applicant considers any of the criteria to be irrelevant for their proposal, they may tick the 'N/A' box in the second column and then state their reason/s in the third column. The fourth and fifth columns may be left blank in this instance.

If the evidence demonstrates that all the relevant assessment criteria for each of the categories are likely to have a neutral or positive impact on health, or a reduction in health inequalities, then the results should be recorded in the Development Health Assessment. This, along with a summary explaining why a full HIA is not required, should be submitted to the Council with the planning application. If the evidence demonstrates that any of the assessment criteria are likely to have a significant negative health impact, or that the health impact is uncertain, then this should be recorded and the other HIA stages should be completed.

2. Scoping

This stage is for designing and planning the HIA as it determines the focus, methods, and work plan. Matters to consider include timescales, geographical boundaries, available resources, who should be involved and how they will be involved, the type of HIA, who will carry out the HIA and the method/s for gathering evidence.

A scoping report should be produced at the end of the scoping stage to record the identified method, stakeholders, and evidence. This should be submitted to the Council for assessment.

3. Appraisal

Using the knowledge and evidence available, the potential type, magnitude, probability, and distribution of both potential negative and positive health impacts identified in the screening stage will be established. This will involve analysing data from various sources and by engaging with stakeholders and the community as appropriate. It will require an understanding of the demographic, health, and economic situation in the area.

This stage will result in a list of the potential positive and negative impacts that the proposal could have on different populations in the existing community, new community, and visitors to the area. It will also include cumulative impacts that might emerge through the combined effects of nearby developments.

4. Reporting

The final report should include the methodology used at the different stages of the HIA and the evidence that was gathered. The report should also include a list of recommendations, based on the evidence, that enhance the positive health impacts and mitigate against the negative health impacts that have been identified for the proposal.

The report and recommendations should also include recommendations for monitoring the future health impact of the proposed development. The monitoring recommendations should identify the organisation/s considered to best for undertaking the monitoring.

5. Monitoring

The final stage is an opportunity to monitor and evaluate the HIA. Evaluation concerns how the HIA was produced and the extent to which it influenced decisions regarding the proposal.

Monitoring identifies how the development affected the health and well-being of both the existing community in the area and the new community created by the proposed development.

3.6 The review of HIAs received by the Council will include consultation with Warwickshire County Council Public Health. Any response will be duly considered by the Council. When reviewing HIAs, the Council will be guided by the WHIASU Quality Assurance Review Framework for Health Impact Assessment.

4. Monitoring

4.1 The successful implementation of this SPD will be assessed through the Authority Monitoring Report (AMR). The AMR will note when the SPD has been used in determining planning applications.

Appendix A – Useful resources

Some of these resources will be updated during the lifetime of this SPD. Care should therefore be taken to ensure that the most recent sources of information are used.

inequalities?		health
		inequalities.
		🗆 Neutral
		🗆 Uncertain

2. Access to healthcare services and other social infrastructure

Criteria	Relevant to this proposal?	Details/Evidence	Potential Health Impact?	Recommended Mitigation or Enhancement Actions
Does the proposal retain or re-provide existing social infrastructure?	□Yes □No □N/A		Positive Negative Neutral Uncertain	
Does the proposal assess the impact on health and social care services?	□Yes □No □N/A		 Positive Negative Neutral Uncertain 	
Does the proposal include the provision, or replacement of a healthcare facility meeting NHS requirements	□Yes □No □N/A		 Positive Negative Neutral Uncertain 	

(and/or does the			
proposed			
development			
provide a financial			
contribution for			
this)?			
Does the proposal	□Yes	🗆 Positive	
assess the capacity,	□No	🗆 Negative	
location and	□N/A	🗆 Neutral	
accessibility of other		🗆 Uncertain	
social infrastructure,			
e.g. schools, social			
care and			
community			
facilities?			
Does the proposal	□Yes	🗆 Positive	
explore	□No	🗆 Negative	
opportunities for	□N/A	🗆 Neutral	
shared community		🗆 Uncertain	
use and co-location			
of services?			
Does the proposed	□Yes	🗆 Positive	
development	□No	🗆 Negative	
contribute to	□N/A	🗆 Neutral	
meeting primary,		🗆 Uncertain	
secondary and post			
19 education needs			
(either financially or			
in kind)?			

Do the effects of the	□Yes	
proposal on access	□No	health
to healthcare	□N/A	inequalities
services and other		🗆 Increases
social infrastructure		health
impact on health		inequalities
inequalities?		🗆 Neutral
		🗆 Uncertain

3. Access to open space and nature

Criteria	Relevant to this	Details/Evidence	Potential Health	Recommended Mitigation or Enhancement Actions
	proposal?		Impact?	
Does the proposal	□Yes		🗆 Positive	
retain and enhance	□No		🗆 Negative	
existing open and	□N/A		🗆 Neutral	
natural spaces?			🗆 Uncertain	
In areas of	□Yes		🗆 Positive	
deficiency, does the	□No		🗆 Negative	
proposal provide	□N/A		🗆 Neutral	
new open or natural			🗆 Uncertain	
space, or improve				
access to existing				
spaces?				
Does the proposal	□Yes		🗆 Positive	
provide a range of	□No		🗆 Negative	
play spaces for	□N/A		🗆 Neutral	
			🗆 Uncertain	

children and young			
people?			
Does the proposal	□Yes	🗆 Positive	
provide links	□No	🗆 Negative	
between open and	□N/A	🗆 Neutral	
natural spaces and		🗆 Uncertain	
the public realm?			
Are the open and	□Yes	🗆 Positive	
natural spaces	□No	🗆 Negative	
welcoming and safe	□N/A	🗆 Neutral	
and accessible for		🗆 Uncertain	
alls			
Does the proposal	□Yes	🗆 Positive	
set out how new	□No	□ Negative	
open space will be	□N/A	🗆 Neutral	
managed and		🗆 Uncertain	
maintained?			
Do the effects of the			
proposal on access	□No	health	
to open space and	□N/A	inequalities.	
nature impact on		□ Increases	
health inequalities?		health	
		inequalities.	
		Neutral	
		🗆 Uncertain	

4. Air quality, noise, and neighbourhood amenity

Criteria	Relevant	Details/Evidence	Potential	Recommended Mitigation or
	to this		Health	Enhancement Actions
	proposal?		Impact?	
Does the proposal	□Yes		🗆 Positive	
minimise	□No		🗆 Negative	
construction	□N/A		🗆 Neutral	
impacts such as			🗆 Uncertain	
dust, noise,				
vibration, and				
odours?				
Does the proposal	□Yes		🗆 Positive	
minimise air pollution	□No		🗆 Negative	
caused by traffic	□N/A		🗆 Neutral	
and energy			🗆 Uncertain	
facilities?				
Does the proposal	□Yes		🗆 Positive	
minimise noise	□No		🗆 Negative	
pollution caused by	□N/A		🗆 Neutral	
traffic and			🗆 Uncertain	
commercial uses?				
Has the proposed				
development been	□No		□ Negative	
assessed for any	□N/A		🗆 Neutral	
potential risk to			🗆 Uncertain	
construction workers				
and/or the future				
users by possible				

land contamination?			
Do the effects of the	□Yes	□ Reduces	
proposal on air	□No	health	
quality, noise, and	□N/A	inequalities	
neighbourhood		🗆 Increases	
amenity impact on		health	
health inequalities?		inequalities	
		🗆 Neutral	
		🗆 Uncertain	

5. Accessibility and active travel

Criteria	Relevant to this	Details/Evidence	Potential Health	Recommended Mitigation or Enhancement Actions
	proposal?		Impact?	
Does the proposal	□Yes		🗆 Positive	
prioritise and	□No		🗆 Negative	
encourage walking	□N/A		🗆 Neutral	
and cycling?			🗆 Uncertain	
Does the proposal	□Yes		🗆 Positive	
connect public	□No		🗆 Negative	
realm and internal	□N/A		🗆 Neutral	
routes to local and			🗆 Uncertain	
strategic cycle and				
walking networks?				
Does the proposal	□Yes		🗆 Positive	
include traffic	□No		🗆 Negative	
management and	□N/A		🗆 Neutral	

calming measures to		🗆 Uncertain	
help reduce and			
minimise road			
injuries?			
Is the proposal well	□Yes	\Box Positive	
connected to public	□No	🗆 Negative	
transport, local	□N/A	🗆 Neutral	
services, and		🗆 Uncertain	
facilities?			
Does the proposal	□Yes	🗆 Positive	
seek to reduce car	□No	🗆 Negative	
use e.g. by using	□N/A	🗆 Neutral	
travel plans?		🗆 Uncertain	
Does the proposal	□Yes	🗆 Positive	
allow people with	□No	🗆 Negative	
mobility problems or	□N/A	🗆 Neutral	
a disability to access		🗆 Uncertain	
buildings and			
places?			
Do the effects of the	□Yes	🗆 Reduces	
proposal on	□No	health	
accessibility and	□N/A	inequalities	
active travel impact		□ Increases	
on health		health	
inequalities?		inequalities.	
		□ Neutral	
		🗆 Uncertain	

6. Crime reduction and community safety

Criteria	Relevant	Details/Evidence	Potential	Recommended Mitigation or
	to this proposal?		Health Impact?	Enhancement Actions
Does the proposal incorporate elements to reduce opportunities for crime?	□Yes □No □N/A		 Positive Negative Neutral Uncertain 	
Does the proposal incorporate design techniques to help people feel secure and avoid creating 'gated communities'?	□Yes □No □N/A		 Positive Negative Neutral Uncertain 	
Does the proposal include attractive, multi-use public spaces and buildings? Has engagement	□Yes □No □N/A □Yes		 Positive Negative Neutral Uncertain Positive 	
and consultation been carried out with the local community?	□ Tes □No □N/A		 Positive Negative Neutral Uncertain 	

Does the proposal assess the impact on Police infrastructure?	□Yes □No □N/A	 Positive Negative Neutral Uncertain 	
Do the effects of the proposal on crime reduction and community safety impact on health inequalities?	□Yes □No □N/A	 Reduces health inequalities Increases health inequalities Neutral Uncertain 	

7. Access to healthy food

Criteria	Relevant to this proposal?	Details/Evidence	Potential Health Impact?	Recommended Mitigation or Enhancement Actions
Does the proposal			□ Positive	
facilitate the supply	□No		🗆 Negative	
of local food, for	□N/A		🗆 Neutral	
example allotments,			🗆 Uncertain	
community farms				
and farmers'				
markets?				
Is there a range of	□Yes		🗆 Positive	
retail uses, including	□No		🗆 Negative	
food stores and	□N/A		🗆 Neutral	
smaller affordable			🗆 Uncertain	

shops for social enterprises, either within the proposal			
or nearby and easily			
accessible?			
Does the proposal	□Yes	🗆 Positive	
avoid contributing	□No	🗆 Negative	
towards an over-	□N/A	🗆 Neutral	
concentration of hot		🗆 Uncertain	
food takeaways in			
the local area and			
in close proximity to			
secondary schools?			
Do the effects of the	□Yes	□ Reduces	
proposal on access	□No	health	
to healthy food	□N/A	inequalities	
impact on health		🗆 Increases	
inequalities?		health	
		inequalities.	
		□ Neutral	
		🗆 Uncertain	

8. Access to work and training

Criteria	Relevant to this	Details/Evidence	Potential Health	Recommended Mitigation or Enhancement Actions
	proposal?		Impact?	
Does the proposal	□Yes		□ Positive	
provide access to	□No		🗆 Negative	
local employment	□N/A		🗆 Neutral	
and training			🗆 Uncertain	
opportunities,				
including temporary				
construction and permanent 'end-				
use' jobs?				
Does the proposal			□ Positive	
provide childcare	□No		□ Negative	
facilities?	□N/A		□ Neutral	
			🗆 Uncertain	
Does the proposal	□Yes		🗆 Positive	
include managed	□No		🗆 Negative	
and affordable	□N/A		🗆 Neutral	
workspace for local			🗆 Uncertain	
businesses?				
Do the effects of the				
proposal on access	□No		health	
to work and training	□N/A		inequalities	

impact on health	🗆 Increases
inequalities?	health
	inequalities.
	🗆 Neutral
	🗆 Uncertain

9. Social cohesion and inclusive design

Criteria	Relevant to this	Details/Evidence	Potential Health	Recommended Mitigation or Enhancement Actions
	proposal?		Impact?	
Does the proposal	□Yes		□ Positive	
connect with	□No		🗆 Negative	
existing	□N/A		🗆 Neutral	
communities, i.e.			🗆 Uncertain	
layout and				
movement which				
avoids physical				
barriers and				
severance and land				
uses and spaces				
which encourage				
social interaction?				
Does the proposal	□Yes		🗆 Positive	
include a mix of uses	□No		🗆 Negative	
and a range of	□N/A		🗆 Neutral	
community			🗆 Uncertain	
facilities?				
Does the proposal	□Yes		🗆 Positive	
provide	□No		🗆 Negative	

opportunities for the voluntary and	□N/A		eutral certain
community sectors?			
Do the effects of the	□Yes		duces
proposal on social	□No	health	h
cohesion and	□N/A	inequ	valities
inclusive design			creases
impact on health		health	h
inequalities?		inequ	valities
		🗆 Ne	eutral
			certain

10. Minimising the use of resources

Criteria	Relevant to this	Details/Evidence	Potential Health	Recommended Mitigation or Enhancement Actions
	proposal?		Impact?	
Does the proposal	□Yes		🗆 Positive	
make most efficient	□No		🗆 Negative	
and effective use of	□N/A		🗆 Neutral	
existing land?			🗆 Uncertain	
Does the proposal	□Yes		🗆 Positive	
encourage	□No		🗆 Negative	
recycling, including	□N/A		🗆 Neutral	
building materials?			🗆 Uncertain	
Does the proposal	□Yes		🗆 Positive	
incorporate	□No		🗆 Negative	
sustainable design	□N/A		🗆 Neutral	
			🗆 Uncertain	

and construction			
techniques?			
Do the effects of the	□Yes	🗆 Reduces	
proposal on	□No	health	
minimising the use of	□N/A	inequalities	
resources impact on		🗆 Increases	
health inequalities?		health	
		inequalities	
		🗆 Neutral	
		🗆 Uncertain	

11.Climate change

Criteria	Relevant to this	Details/Evidence	Potential Health	Recommended Mitigation or Enhancement Actions
	proposal?		Impact?	
Does the proposal	□Yes		🗆 Positive	
incorporate	□No		🗆 Negative	
renewable energy?	□N/A		🗆 Neutral	
			🗆 Uncertain	
Does the proposal	□Yes		🗆 Positive	
ensure that buildings	□No		🗆 Negative	
and public spaces	□N/A		🗆 Neutral	
are designed to			🗆 Uncertain	
respond to winter				
and summer				
temperatures, for				
example ventilation,				

shading, and landscaping?			
Does the proposal	□Yes	🗆 Positive	
maintain or	□No	🗆 Negative	
enhance	□N/A	🗆 Neutral	
biodiversity?		🗆 Uncertain	
Does the proposal	□Yes	🗆 Positive	
incorporate	□No	🗆 Negative	
sustainable urban	□N/A	🗆 Neutral	
drainage		🗆 Uncertain	
techniques?			
Do the effects of the	□Yes	□ Reduces	
proposal on	□No	health	
considering climate	□N/A	inequalities	
change impact on		🗆 Increases	
health inequalities?		health	
		inequalities.	
		🗆 Neutral	
		🗆 Uncertain
